Per-concept grounding audit; outlined cells are the actual guidance targets
Names and statistics selected on validation only; black outline does not mean verified learning
MRI-image edge-transition steepness — unverified guidance
MRI-image local edge abundance — unverified guidance
MRI-image directional edge coherence — unverified guidance
MRI-image fine edge detail — unverified guidance
MRI-image local texture variability — unverified guidance
MRI-image neighbouring-pixel contrast — unverified guidance
MRI-image local texture homogeneity — unverified guidance
MRI-image local intensity entropy — unverified guidance
MRI-image relatively bright image regions — unverified guidance
MRI-image relatively dark image regions — unverified guidance
MRI-image local intensity deviation — unverified guidance
MRI-image threshold-region occupancy — unverified guidance
MRI-image neighbouring-pixel contrast — weak unguided association
MRI-image relatively dark image regions — weak unguided association
MRI-image relatively bright image regions — weak unguided association (learned variant 1)
MRI-image relatively bright image regions — weak unguided association (learned variant 2)
image-edge response
local texture response
threshold-region response
relative image brightness
edge-transition steepness
local edge abundance
directional edge coherence
fine edge detail
local texture variability
neighbouring-pixel contrast
local texture homogeneity
local intensity entropy
relatively bright image regions
relatively dark image regions
local intensity deviation
threshold-region occupancy
